Trees are shown by symbols below, colour-coded to indicate their 'retention categories'. The root protection area (RPA) of each tree or group is indicated by a line of the same colour (dashed in the case of category U trees) drawn at the appropriate root protection radius, as defined by BS5837.

These nominal, circular RPAs are for guidance only, to assist in determining the design & layout of any proposed development: they do not represent definitive Construction Exclusion Zones.

- Category A (High retention value)
- Category B (Moderate Retention value)
- Category C (Low retention value)
- Category U (Unsuitable for retention in a developed site)
